(No known non-CHD cause and at least one of the following:
(1)-chest pain within 72 hours of death and/or (2)-history of chronic ischemic heart disease in the absence of valvular heart disease or non-CHD, and death certificate consistent with CHD as the underlying cause.)

☐ 14 Possible Coronary Heart Disease (CHD)
(No known non-CHD cause, and death certificate consistent with CHD as the underlying cause.)

   6.1. Coronary death based on: (Mark all that apply.)
   - [ ] Hospitalized myocardial infarction within 28 days of death
   - [ ] Previous angina, myocardial infarction, or revascularization procedure and no known potentially-lethal non-coronary disease process
   - [ ] Coronary heart disease (CHD) diagnosed as cause of death at post-mortem examination
   - [ ] Death resulting from a CHD-related procedure, such as coronary bypass grafting (CABG) or percutaneous transluminal coronary angioplasty (PTCA) [For any death resulting from a revascularization procedure or an in hospital death, complete Form 121 – Report of Cardiovascular Outcome]
   - [ ] Other (none of the above)

   6.2. Coronary death subclassification: (Mark the one category that applies best.)
   - [ ] Definite fatal MI: no known non-atherosclerotic cause (and death within 28 days of definite MI) or autopsy evidence of acute MI
   - [ ] Definite fatal CHD: no known non-atherosclerotic cause and at least one of the following:
     (1) chest pain within 72 hours of death, or (2) history of chronic ischemic heart disease in the absence of valvular heart disease or non-ischemic cardiomyopathy
